Web-Server Requirements

Software requirements

Information

This document contains information about the requirements of the web server when using the "Time Recording Web" module. Please note these when procuring your hardware

Version

21.05.2024

Software requirements

Webserver

- ☐ Apache with mod_rewrite, mod_env, htaccess
- ☐ Calling the web application via http or https according to customer requirements: port 80 and / or 443

PHP

- ☐ smaller version 7, for example 5.6.x

Mysql

- ☐ Version 5.7.x or 8.x
- ☐ In addition to the access via web server/PHP the database hosted for us must be accessible via ODBC from the FileMaker server.
- ☐ Access via ODBC/MySQL Connector: Port 3306
- ☐ We will install the ODBC driver we need ourselves on the system with the FileMaker server

Management access to

- ☐ MySQL
If the database is hosted on your intranet: Access does not have to be necessarily be enabled externally. We can also perform the access e.g. from the FileMaker server.
- ☐ Webserver
Access to the storage space provided for us. Access via SSL/SCP, FTP, etc.
Depending on what is available.

advanter Application-Server

- ☐ Dedicated advanter application server for database synchronization.
