

advanter® 7.1

E-Mail integration requirements

Hardware requirements

Software requirements

Informationen

For email integration, an Outlook is installed on a separate Windows client and set up with shared access to the user mailboxes. The Outlook mailboxes are connected and synchronized with advanter® via a plug-in.

The advanter application server (above client) synchronizes every 1-3 minutes new data in inbox, outbox, sent items, appointments and addresses (via Outlook with mailbox access).

The e-mail attachments are not loaded into the database, but stored on a file server repository according to your specifications.

Version

24.09.2025

Microsoft Windows Client

Hardware requirements

- CPU 2.8 GHz
- Memory: greater than 8 GB
- Screen resolution: optimal 1920 x 1200
